SUMMARY

Software Engineer with hands-on experience building production-grade web applications using React and Next.js across fintech and healthcare products. Strong foundation in JavaScript and TypeScript, with a focus on performance, accessibility, and maintainable architecture. Experienced in implementing feature workflows and integrating applications with backend APIs and AI-powered services to deliver reliable functionality in live production environments.

EXPERIENCE

Sattvabit - Surat, Gujarat

Jan 2024 - Present

Software Engineer (Jul 2025 - Present)

- Led development of an AI-powered Trading Coach using React and Next.js, implementing conversational and data-driven workflows for production users.
- Integrated the client application with backend services to support domain queries and file uploads (images, PDFs), handling client-server communication and collaborating with product, design, and engineering teams to deliver deployable features.
- Developed user onboarding and account integration flows enabling users to connect external trading platforms, import historical trades, and automatically synchronize trade activity upon login.
- Built a backtesting (paper trading) system supporting configurable sessions (capital, interval, and date range) and streamed market candle data via WebSockets, integrating third-party market data providers to simulate trading strategies.

Frontend Developer (Jul 2024 - Jun 2025)

- Developed modular interfaces for a multi-tenant healthcare (EMR) platform using React and Electron, implementing real-time chat, AI-assisted suggestions, and audio recording workflows for clinical use cases.
- Built reusable component systems from Figma designs and modernized a legacy B2B commerce interface using React and Tailwind CSS, improving consistency and maintainability across enterprise workflows.
- Delivered production dashboards and data views for a fintech trading analytics platform used by large user bases, focusing on responsiveness and reliability.
- Contributed to internal tools and platform improvements, including an AI-assisted Slack bot for real-time messaging and technical SEO enhancements to improve website indexing and visibility.

Frontend Developer Intern (Jan 2024 - Jun 2024)

- Learned core React concepts including components, hooks, Redux state management, and client-side persistence (localStorage) while working within an existing production codebase.
- Built and maintained UI components and a sample Todo application using React and Redux to strengthen component-driven development and state handling.
- Implemented responsive UI components (forms, tables) for a fintech trading platform with Next.js routing and layouts.

EDUCATION

Sardar Vallabhbhai Patel Institute of Technology, B.E. in Computer Engineering

Nov 2020 – Jan 2024

- CGPA: 8.33/10

PROJECTS

AevumAi - Template-Driven Email Outreach Tool

[AevumAi](#)

- Built a web-based job application outreach tool to manage resumes and streamline application workflows via an interface.
- Implemented reusable email templates with dynamic variables (company, role) to enable personalized messaging at scale.
- Developed a bulk email workflow supporting recipients while preserving per-recipient customization and template integrity.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS

Libraries & Frameworks: React.js, Next.js, Nest.js Redux Toolkit & RTK Query, Tailwind CSS

Tools & Platforms: Git, GitHub, Vite.js, VS Code

Performance & SEO: Server-Side Rendering (SSR), Technical SEO, Responsive Design, Core Web Vitals
