SUMMARY

Software Developer with 2 years of experience building production-grade web applications using React and Next.js across fintech and healthcare domains. Proficient in JavaScript and TypeScript, with hands-on experience in performance optimization and AI-integrated features. Focused on delivering reliable, scalable frontend systems.

EXPERIENCE

Sattvabit - Surat, Gujarat

Mar 2024 - Present

Software Developer (Jul 2024 - Present)

- Led full-stack development of an AI-powered Trading Coach supporting conversational AI, PDF and image uploads, and domain-specific queries using Next.js and NestJS.
- Developed user onboarding and account integration flow enabling users to connect their trading platform, import historical trades, and automatically synchronize trade activity upon login.
- Built a real-time backtesting feature supporting 6 market types (stocks, commodities, forex, crypto, futures) and multiple candle intervals, with WebSocket-streamed historical data, configurable sessions, and full trade simulation including buy/sell, stop-loss, take-profit, and position management.
- Developed modular interfaces for a multi-tenant healthcare (EMR) platform using React and Electron, implementing real-time chat, AI-assisted suggestions, and audio recording workflows for clinical use cases.
- Built reusable component systems from Figma designs and modernized a legacy B2B commerce interface using React and Tailwind CSS, improving consistency and maintainability across enterprise workflows.
- Delivered production dashboards and data views for a fintech trading analytics platform used by large user bases, focusing on responsiveness and reliability.
- Optimized Core Web Vitals from 74 to 90+ by implementing technical SEO enhancements and performance optimizations.

Software Developer Intern (Mar 2024 - Jun 2024)

- Implemented responsive UI components (forms, tables) for a fintech trading platform with Next.js routing and layouts.
- Contributed to the initial project setup of the trading journal platform, configuring the codebase structure and development environment.
- Built an AI-powered Slack bot using OpenAI API that delivers daily quotes and handles threaded Q&A interactions within team channels.

EDUCATION

Sardar Vallabhbhai Patel Institute of Technology, B.E. in Computer Engineering

August 2020 - May 2024

- CGPA: 8.33/10

PROJECTS

AevumAi - Template-Driven Email Outreach Tool

[AevumAi](#)

- Built a full-stack job application platform using Next.js, TypeScript, Supabase, Google OAuth, and TipTap Editor, enabling users to manage resumes, cover letters, and application workflows from a single dashboard.
- Developed a dynamic template engine that parses user-defined variables (e.g., company name, role, HR name) and automatically generates input forms, allowing personalized email content without manual editing.
- Integrated Gmail OAuth and email delivery workflows to send personalized job applications directly from users' own Gmail accounts, with automatic resume attachment and configurable document selection.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS

Libraries & Frameworks: React, Next.js, NestJS, Redux Toolkit & RTK Query, Tailwind CSS

Databases: PostgreSQL

Tools & Platforms: Git/GitHub, Vite, AWS Amplify, Supabase, Vercel, Electron
